Operator Manual

Remote Management & Monitoring System

v1.0.250

rauf.hasanov@gmail.com

Table of Contents

1	Agent Installation	3
2	Panel Login	4
3	Dashboard	5
4	Screen (Stream)	6
5	File Manager	7
6	Processes & Services	8
7	Terminal	9
8	Registry	10
9	Screenshots	11
10	Audio	12
11	Event Log	13
12	Defense	14
13	Settings	15
14	Remote Update	16
15	Users	17
16	Troubleshooting	18

IMPORTANT:

All technical operations run as SYSTEM context.
Requires authorization from device owner or IT administrator.

1. Agent Installation

Description

The agent is installed on the target computer once and runs automatically as Windows service MspIscSvc on every system boot.

Requirements

pnpxt.dll	Agent (main module)
pnpxt.sys	AES-256 encrypted config
install.bat	Installer (run as admin)
uninstall.bat	Agent removal

Method 1 - USB (Recommended)

- Copy dist/usb to a flash drive
- Insert into target computer
- Right-click install.bat -> Run as Administrator
- Confirm UAC prompt
- Window closes = installation complete

Method 2 - Browser

- Open browser on target machine
- Navigate to VPS in browser
- Log in with operator credentials
- Click "Download installer"
- Run install-web.bat as Administrator

Uninstall

Run uninstall.bat as Administrator. The service will stop and be removed cleanly.

Windows Service Details

Service name	MspIscSvc
Entry point	PnpServiceEntry
Startup type	Automatic
Context	LocalSystem (SYSTEM)

2. Panel Login

Accessing the Operator Panel

The operator panel is an ordinary web page. No software installation required. Works in Chrome, Edge, Firefox.

Login Steps

- Open Chrome or Edge browser
- Navigate to: `https://[VPS IP address]`
- Browser will show a certificate warning
- Click Advanced -> Proceed to site (self-signed certificate - this is normal)
- Enter username and password
- Click "Log In"

Connection Status

[ONLINE] green	Agent connected and operational
[OFFLINE] red	Agent offline (commands queue up)
[RECONNECT]	Reconnecting...

Certificate Note

A self-signed TLS certificate is used - this is standard practice for private infrastructure. The browser warning is expected behavior, not an error.

3. Dashboard

Overview

The Dashboard tab shows target machine status in real time. All metrics are updated automatically via WebSocket connection.

System Metrics

CPU %	Processor load in real time
RAM	Memory usage (MB / %)
GPU	GPU load (if available)
Disk	Disk activity

VPS1 and VPS2 Cards

VPS1 and VPS2 cards show relay server status independently - each has its own [Refresh] button. Use to diagnose connection issues.

Speed Test

Measures connection speed to VPS. Useful for assessing channel quality to the target.

Activity Log

Records all operator actions with @username and timestamp. Stored on VPS. Cannot be edited by operators.

4. Screen (Stream)

Starting a Stream

Screen tab. Click the "Start" button to begin streaming. Audio and video are transmitted separately.

Stream Parameters

FPS (1-60)	15=normal, 30=smooth, 60=maximum
Quality (1-100)	Default: 75
Scale (%)	Image downscale on target side
Codec	MJPEG or H.264

Action Buttons (floating pill)

The floating pill is at the bottom-right corner of the stream window:

[FIT/FILL]	Toggle between fit and fill display modes
[SCREENSHOT]	Save PNG to Downloads folder
[AUDIO]	System audio via WASAPI loopback
[REC]	Record video to .webm file
[FULLSCREEN]	Toggle fullscreen mode

Recording with Audio

To record video with audio: 1) Enable [AUDIO]. 2) Click [REC]. Order matters!

5. File Manager

File System Access

Full access to the target file system. Works with all drives and network shares.

Navigation

- Click folder to open
- [Up] button or breadcrumbs to go up one level
- Click filename to download
- Large files: segmented transfer with progress bar

Uploading Files to Target

- Click "Upload" button
- Or drag and drop files onto the panel
- File is saved to current directory on target

File Operations

Download	Click filename - segmented download
Upload	Button or drag & drop
Delete	Delete button in context
New folder	New Folder button

6. Processes & Services

Processes Tab

Shows all active processes with PID, name, CPU load and RAM usage. Refresh on demand.

PID	Process identifier
Name	Executable name
CPU%	Processor load
RAM	Memory usage

Process Actions

- Select process -> click "Kill" to terminate
- "Run" field + Enter - launch program as SYSTEM

Services Tab

Start	Start a service
Stop	Stop a service
Restart	Restart a service
Startup type	Auto / Manual / Disabled

7. Terminal

Description

Full command line access. Commands run as SYSTEM with maximum privileges (full administrator rights).

Shell Modes

cmd	Windows Command Prompt
PowerShell	Windows PowerShell

Important Notes

- Interactive commands (pause, choice) may hang
- Use /Y, -Force, -Confirm:\$false flags
- cd command changes directory for current session
- All operations run as SYSTEM

Example Commands

ipconfig /all	Network configuration
netstat -ano	Active connections
tasklist	Process list
sc query	Service status
reg query HKLM\...	Registry query

8. Registry

Registry Browser

Full access to the Windows registry with a tree browser. Navigation works like Windows Explorer.

Registry Hives

HKLM	HKEY_LOCAL_MACHINE - machine settings
HKCU	HKEY_CURRENT_USER - user settings
HKCR	HKEY_CLASSES_ROOT - file associations
HKU	HKEY_USERS - user profiles
HKCC	HKEY_CURRENT_CONFIG - current config

Actions

- Click key to show values on right panel
- Right-click value -> "Edit" to modify
- Right-click -> "Delete" - IRREVERSIBLE!

[WARN] Warning

Deleting registry keys is IRREVERSIBLE. Incorrect changes can break the operating system. Always create a backup before making changes.

9. Screenshots

Automatic Screenshot Capture

Agent captures screenshots automatically. Default interval: every 10 seconds. Stored on VPS.

Gallery

- Thumbnails displayed in main area
- Click thumbnail -> inline preview on right
- Click preview image -> fullscreen view
- Select -> Delete: preview auto-clears when deleting current image

Settings

Interval	10 seconds (configurable)
Quality	75% (JPEG)
Scale	50% (downscaled)
Mode	Always / App filter

App Filter

Can be configured to capture only when a specific application is in the foreground (e.g., browser or Excel).

10. Audio

Microphone Recording

Continuous microphone recording from target. 5-minute segments (OGG Opus format). Stored on VPS.

Player

- Click file to start playback
- Deleting currently playing file auto-clears the player

Technical Details

Interface	WASAPI loopback from SYSTEM
Windows indicator	Does not appear
Format	OGG Opus
Segment duration	300 seconds (5 minutes)
Sample rate	16000 Hz
Bitrate	128 kbps
Gain	100%

DSP Settings

Denoise	Enabled by default
Hum filter	50 Hz

11. Event Log

Windows Event Log Viewer

Viewer for the Windows Event Log. Used to diagnose crashes and problems on the target machine.

Sources

Application	Application events
System	System events
Security	Security events

Filters

Error	Critical errors
Warning	Warning messages
Information	Informational events

Usage

- Click entry -> details shown below
- Filter by source and level
- Refresh on demand

12. Defense

Windows Defender Management

The Defense tab provides access to Windows Defender controls and event log settings.

Defender Operations

Enable/Disable	Toggle real-time protection
Run scan	Full or quick threat scan
Quarantine	View and manage quarantined items
Scan results	Last scan + detected threats

Event Log Cleanup Settings

Configure automatic Windows Event Log cleanup. Removes noisy install-time entries to keep the log clean for diagnostics.

Recommendation

Defender operations require care. Disabling protection should be temporary and with full understanding of risks.

13. Settings

Settings Tabs

Update	Upload and update pnpxt.dll
Deploy	VPS address and room token
Config	All agent parameters
Threats	Security monitoring

Agent Config (Config tab)

Stream	FPS, quality, codec, scale
Screenshots	Interval, quality, mode
Audio	Segment length, sample rate, bitrate, DSP
STUN/TURN	Server addresses for WebRTC
Log cleanup	Auto Event Log cleanup

Deploy Tab

VPS address: wss://[IP]/ws | Room token: unique session identifier. Change the token when replacing the agent.

14. Remote Update

Remote Agent Update

The agent updates remotely without physical access to the target. Process takes 15-30 seconds.

Update Steps

- 1. Settings -> Update -> Select file (pnptext.dll)
- 2. Click "Upload to VPS"
- 3. Click "Update Agent"
- 4. Agent downloads the file and replaces old one
- 5. Service restarts automatically
- 6. Connection briefly drops (~5 seconds)
- 7. Status "Online" = update complete

Parameters

Update time	15-30 seconds
Connection drop	~5 seconds
Result	Online status
Rollback	Upload previous version DLL

15. Users

User Roles

Administrator	All tabs + user management
Operator	Permitted tabs only

Adding a User

- Users tab (admin only)
- Click "Add"
- Fill in: login / password / role / tabs
- Click "Save"

Activity Log

Each operator sees their @username in the activity log. All actions are logged automatically.

UI Theme

Each user can select their own color theme (the [THEME] button in the panel header).

16. Troubleshooting

Common Issues and Solutions

Problem	Cause	Solution
Status OFFLINE	Target powered off / no internet	Check power and internet connection on target
Stream will not start	Agent not running	Check MsplscSvc service in services.msc
Black screen	Screen locked / no permission	Unlock session or restart agent service
File download fails	Insufficient rights / buffer	Use terminal to copy file manually
No audio	WASAPI unavailable	Check Windows audio devices on target
Recordings not saving	VPS disk full	Clean old files in /opt/remotedesk/
Update hangs	No rights to replace DLL	Stop service manually via terminal first
Login not working	Wrong password / cookies	Clear browser cookies, retry login
